Getting Formula

Module 1 : PROMPT #1

I work as an Excel operator and have a dataset where **Column "J" contains** the employee joining dates. I want to calculate the duration since each employee joined the company, specifically in terms of years, months, and days. Please provide a formula to achieve this.

Module 1 : PROMPT #2

I have an excel file where I want to remove blank rows from this file so tell me steps to remove all the blank rows

Module 1 : PROMPT #3

In my Excel file, Column "E" contains employee designations and Column "F" contains their salaries. I want to calculate the total salary for each designation. Please provide the step-by-step process along with the formula to do this.

**Module 2:
Create own formula
Using A.I.**

Module 2 : PROMPT #1

In my Excel file, the employee names are written as "First Name Last Name" in a single cell. I want to reverse the order so that it displays as "Last Name First Name". Please provide a VBA code to create a custom formula for this.

Module 2 : PROMPT #2

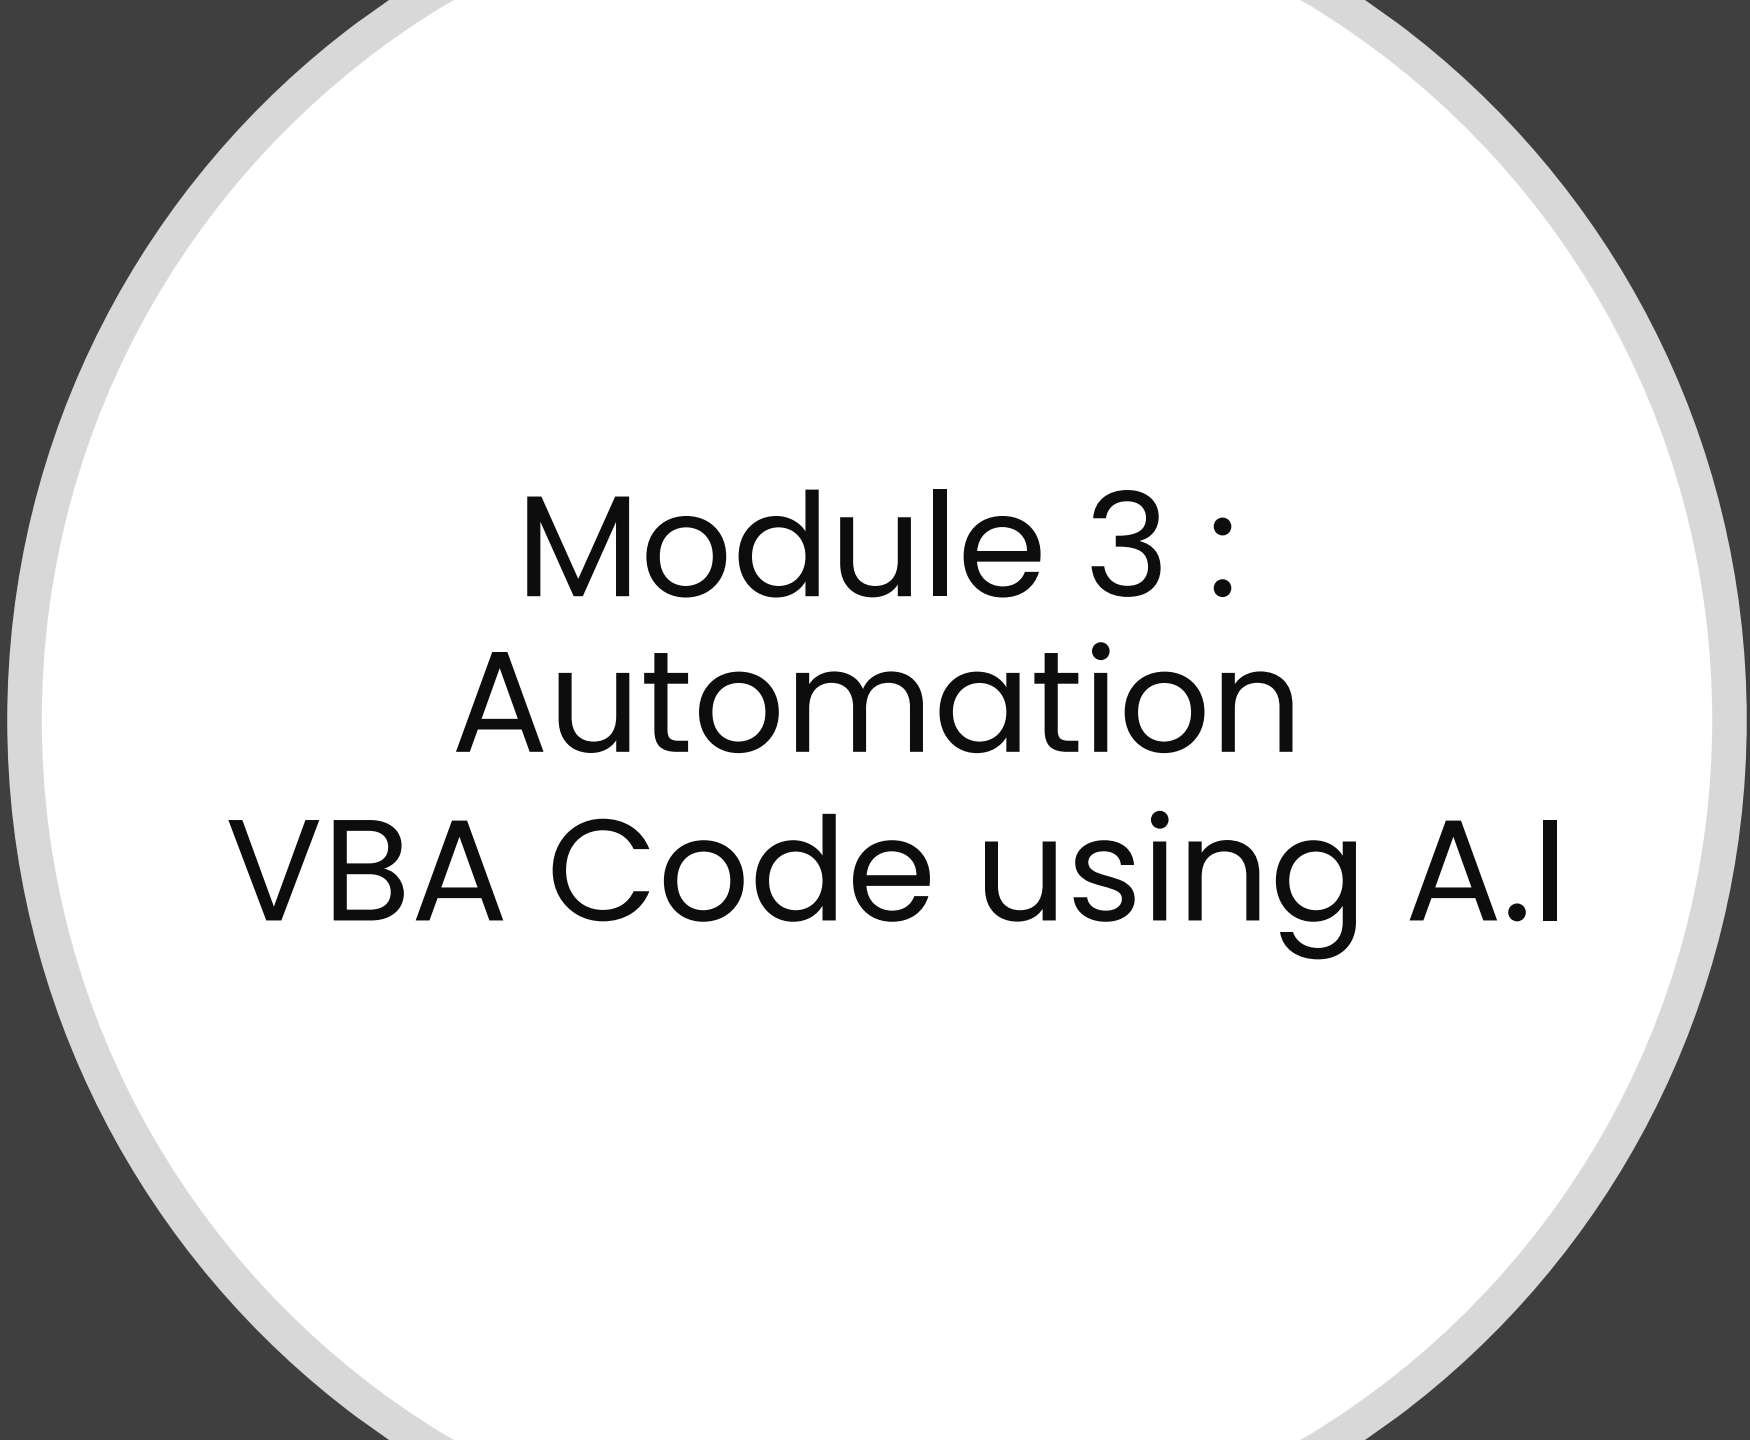

Please provide another VBA code to create a custom formula for my Excel data. In the Employee Name column, the names are written without spaces—for example, "RakeshSharma" or "AjaySingh". I want to insert a space between the first and last names. It's easy to identify the separation because both the first and last names start with a capital letter

Module 2 : PROMPT #3

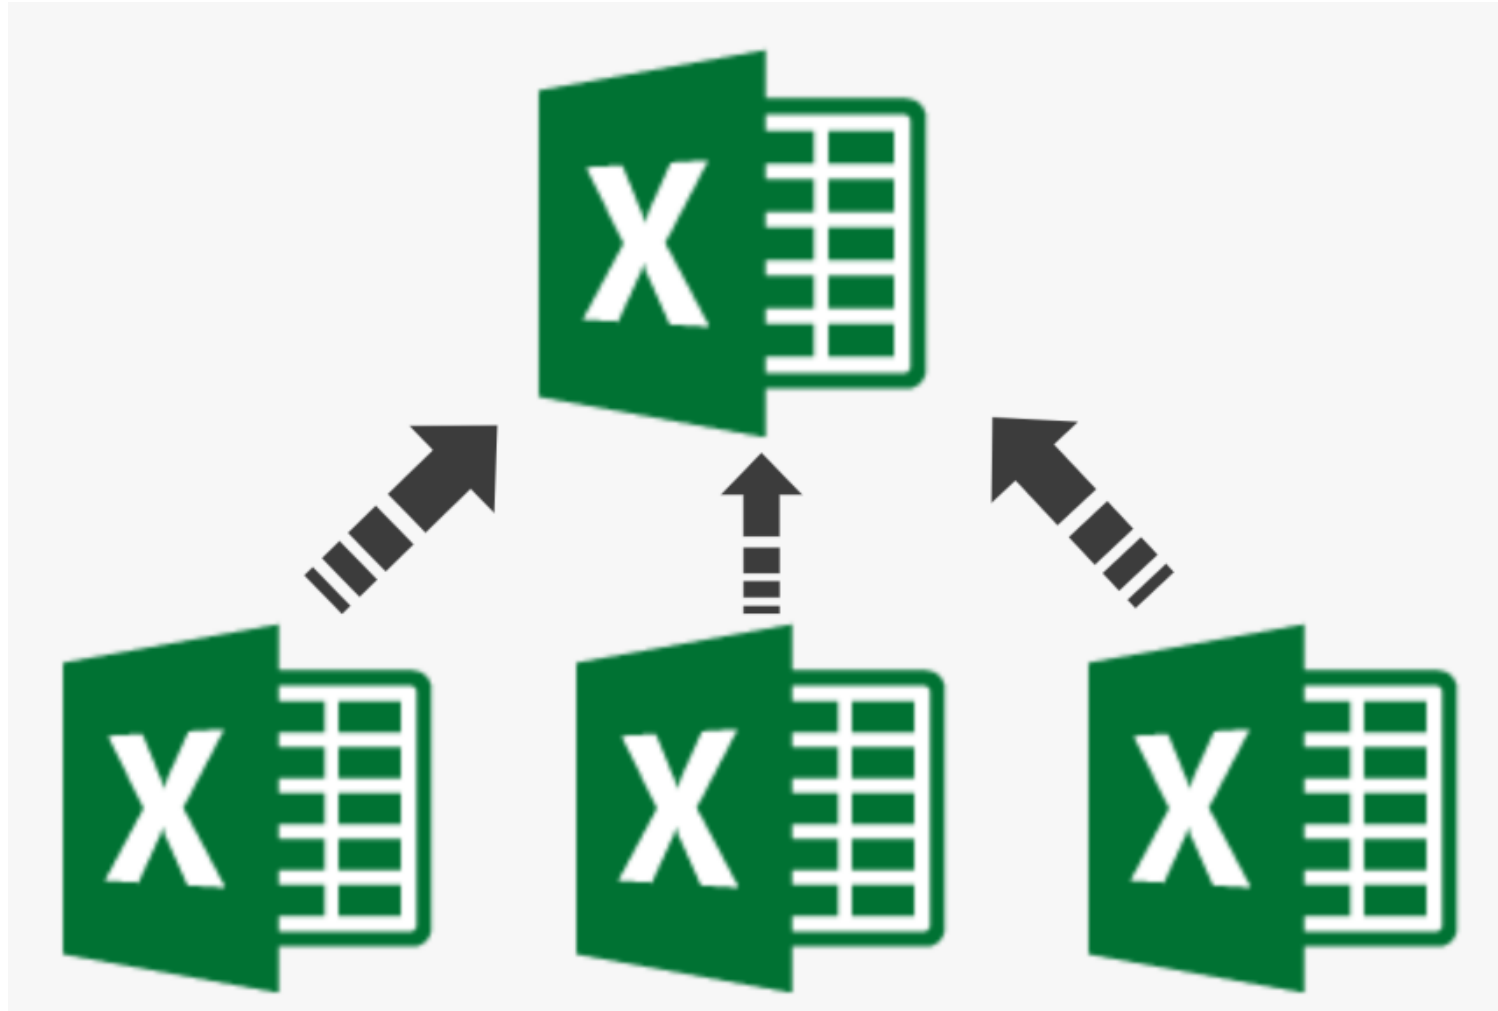

I want to Create two new formulas in Excel using VBA Code to separate text and numbers from the cell

Module 2 : PROMPT #4

Create an Excel Formula using excel VBA code to extract emails from the text.

Module 3 : Automation VBA Code using A.I

Merge excel
files using
ChatGPT

Module 3 : PROMPT #1

Write an Excel VBA Code for me where I want to merge data of several excel files from one folder so follow the given steps

- 1) Once I run the VBA Code, I should get popup to select folder
- 2) Once I select the folder which contains all the excel files then combine all the data of all selected excel file and Insert a new sheet in my current workbook and show all the combined data in this newly created sheet.

Module 3 : PROMPT #2

Give me another VBA Code to Remove All the rows from my current sheet which contains 'Order Number' Text except row no.1

Project Using VBA Code

Module 3 - PROMPT #3

I want to send email to all the customers using outlook, my all the customers email id's are available in my excel file data. In excel file fields are located as follows

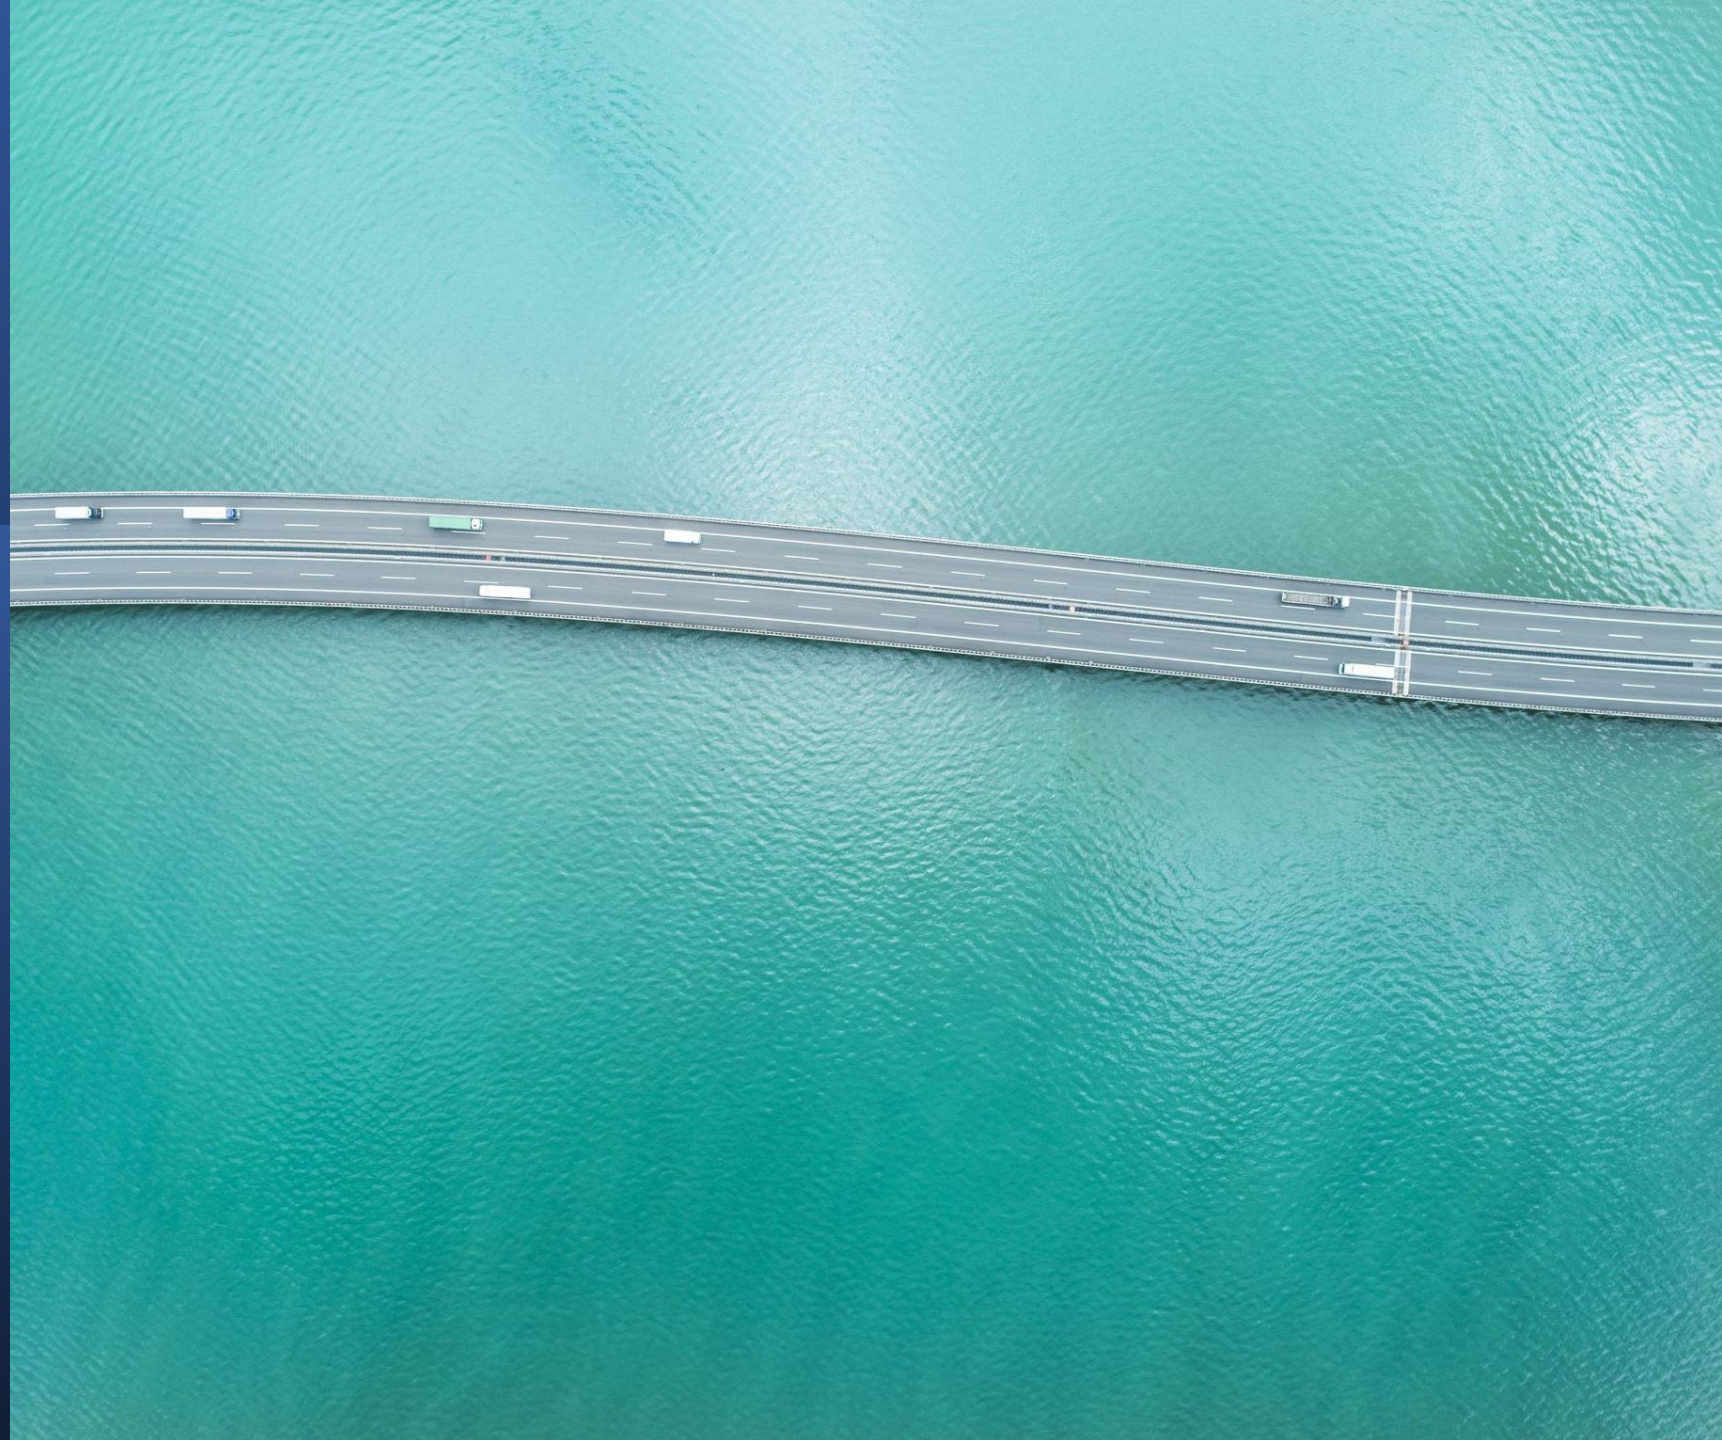

- 1) Column B has Customer Name
- 2) Column C has Email ID's
- 3) Column D has Amount Pending

Now I want to send all the emails by one click and every customer should get email in following format

Hello <<Customer name>>,
Your Amount is Pending Rs.<<Amount Pending>>

also note data my data has headers. So, Write a VBA Code for me to send all emails by one click.

Thank you
